

**mobiTOUCH the Logistician-Tool-Box**

MT secures/configures workflows and communication to higher- or lower-level systems: ERP, MES, plant controls or the QS system

- 1 **MT Wearable with HyWEAR – Hands free**
  - Preserve the natural ergonomics of a workflow instead of disturbing free movement with a data acquisition procedure
- 2 **MT ESL – E-Ink – Process status-relevant information at a glance**
  - Enable "implicit verification" without additional tools on every object relevant of intra-logistics e.g. handling unit, transport unit, shelf, workpiece or workpiece carrier
- 3 **MT ESL – Locating – Automatic booking from movement**
  - Replace **SCAN** process steps by localization and automatic booking
- 4 **MT ESL – LED – Light guides processes**
  - Light signals and colours can be configured directly by the logistician himself as wireless-ad-hoc workflows
  - Sequencing | Repacking, unpacking, sorting | Order picking or set building
- 5 **MT Activator® – the ‘DASH-button’ for workers & logisticians**
  - That's as fast as it can get! Everything is communicated in 0.2 seconds! Feedback, approvals, requests, directly at the object in process
  - The message to the host includes both, the context of the ESL and the selected operation
- 6 **MT ESL + MT Activator® – more information; 100% secure and available**
  - Traceability and data protection through unique RFID ID plus AES security
  - Information available: offline, on premise, as corporate-cloud or via MT WEB
- 7 **mobiTOUCH – Intralogistics Middleware**
  - Place EVENTS
  - Manage ESL information
  - Deploy required workflows ad-hoc
